

The Podiatric Centre of Foot- Forward once more introduces a new innovation in its services. The Custom made insoles in one day.

This is a service which is predominantly tailored to meet the needs of the potential patients that live in other cities far away or in neighbor countries. These people now can benefit of the technology and fast service and have their insoles in the same day.

There is a high demand of distant patients to obtain their insoles as fast as possible. Patient from other towns and in many cases neighbor countries now will have the opportunity to save time and additional transport expenses.

A podiatrist of the podiatric-foot-forward team will work exclusively for you, to take the full gait analysis, the foot pressure measurements, to discuss the problem and the footwear, in order to submit your insoles in one day! Moreover, medical footwear may be applied with insoles.

It is very important to note that a continual communication will be taking place even after the completion of the service like we always do for all our patients. Insoles need a few weeks to show their full effect.

Patients have to book their appointment at least two weeks before the day of their visit, in order to organize correctly our time.

For patients from other countries we can assist for accommodation and transportation. For this kind of service please do not hesitate to ask more details on the phone or on email.
